SUMMARY

Works at the intersection of Quality Control and IT — digitizing paper-based shop-floor operations and automating recurring reporting. Built an automotive Tier-1 supplier's QC digitization stack as an intern (production web app, Excel/VBA automation suite, translation tooling), then registered my own business and was retained as an independent contractor to keep building and maintaining it.

EXPERIENCE

Hansae Mobility USA – Remote (Busan, Republic of Korea)

Independent Software Contractor (Sole Proprietor) | Jul 2026 – Present

- Retained after the internship through a B2B contract with my own registered sole proprietorship — building new internal tools and maintaining / extending the QC digitization stack, collaborating remotely with the QC and IT teams in the U.S.
- Shift-scheduling app adopted for production use; QC checksheet web app in final on-site pilot ahead of planned rollout.

Hansae Mobility USA – Pontiac, MI

Quality Control Intern | Jan 2026 – Jun 2026

Performed hands-on quality operations, then digitized them — the department's sole developer, working between the QC and IT teams.

- Performed core quality operations: routine production-floor audits, quality-alert follow-up reviews, rework inventory validation (system vs. physical records), and Quality / Production check-sheet review and filing under Document Control standards.
- Built a QC checksheet web app (Next.js, Prisma, SQL Server) digitizing the paper checksheets I reviewed by hand — 2 automotive OEM programs, 10 production lines, ~50 part numbers — with per-part spec validation, 3-shift tracking, corrective-action photo logs, daily email reports, and in-app SPC control charts (previously manual Excel work); now in on-site pilot, maintained jointly with IT.
- Automated six recurring Excel reports with VBA (CILR, debit, downtime EOL, rework, scrap, LPA scheduling), cutting ~10 hours of monthly manual work to minutes and standardizing output quality across operators.
- Developed a desktop work-instruction translator (Python; DeepL / OpenAI / Claude APIs) that batch-translates DOCX, PPTX, XLSX, and PDF documents with multi-language glossaries, and a shift-scheduling desktop app (Python, FastAPI, SQL Server).
- Analyzed the plant ERP database with SQL and produced ERD / table-spec documentation to enable reporting integrations.
- Scoped requirements with the QC manager, secured executive sign-off, and trained ~15 production supervisors; designed a standardized AI-assisted development pipeline with verification and security guardrails, plus onboarding work instructions so non-developers can operate every tool.

International Marketing Project – Busan, Republic of Korea

Project Lead | Sep 2024 – Dec 2024

- Led end-to-end Sweden go-to-market research for an AI note-taking device — demand sizing with OECD indicators, a six-app competitive benchmark, and GDPR risk assessment — delivering an executive brief and launch deck.

Republic of Korea Army – Gangwon, Republic of Korea

Supply Specialist (Class I Warehouse), Sergeant | Dec 2020 – Jun 2022

- Managed Class I warehouse resupply across 12 item categories under tight timelines; earned Early Promotion for performance and was discharged as Sergeant.

AWARDS & HONORS

- Excellence Award, company-wide AI Utilization Contest — Hansae Mobility (2026)
- First Prize, BITLO (Busan International Trade & Logistics Open) — Busan Development Institute & Busan Port Authority
- Best Debater & Best Project — Dongwon Group talent-development program

SKILLS

Python | TypeScript / Next.js | SQL (SQL Server) | Excel / VBA | FastAPI | Prisma | Git / GitHub

Languages: Korean (native), English (fluent)

EDUCATION

Pukyong National University | Double major, International Business & Big Data Convergence | Busan, Republic of Korea | Expected 2027

Exchange: Georgia College & State University (Jan – May 2025) · Wayne State University, Detroit, MI (May – Dec 2025)
