SUMMARY

I worked the shop floor, then built the software for it. Quality Control at an automotive Tier-1 supplier, where I digitized the paper checksheets I had been filling out by hand — then registered my own business and was retained as an independent contractor to keep building and maintaining the stack.

EXPERIENCE

Hansae Mobility USA — Remote — Busan, South Korea

Independent Software Contractor (Sole Proprietor) | Aug 2026 – Present

- Retained after the internship through a B2B contract with my own registered sole proprietorship — maintaining and extending the QC digitization stack, collaborating remotely with the QC and IT teams in the U.S.

Hansae Mobility USA — Pontiac, MI, USA

Quality Control Intern | Jan 2026 – Jun 2026

Performed hands-on quality operations, then digitized them — the department's sole developer, working between the QC and IT teams.

- Performed core quality operations: routine production-floor audits, quality-alert follow-up reviews, rework inventory validation (system vs. physical), and check-sheet review and filing under Document Control standards.
- Built a QC checksheet web app ([qc-checklist](#)) digitizing the paper checksheets I reviewed by hand — 2 OEM programs, 10 lines, ~50 part numbers — with per-part spec validation, 3-shift tracking, corrective-action photo logs, daily email reports, and in-app SPC charts; now in on-site pilot, maintained jointly with IT.
- Automated six recurring Excel reports with VBA ([VBA-Macro-for-QC](#)) — CILR, debit, downtime EOL, rework, scrap, LPA scheduling — cutting ~10 hours of monthly manual work to minutes.
- Built a desktop work-instruction translator ([WorkInstruction-Translator](#); DOCX / PPTX / XLSX / PDF with multi-language glossaries) and a shift-scheduling app ([ShiftScheduler](#); Python, FastAPI, SQL Server) now in production use.
- Analyzed the plant ERP database with SQL and produced ERD / table-spec documentation to enable reporting integrations.
- Scoped requirements with the QC manager, secured executive sign-off, trained ~15 production supervisors, and designed a standardized AI-assisted development pipeline with security guardrails.

International Marketing Project — Busan, South Korea

Project Lead | Sep 2024 – Dec 2024

- Led end-to-end Sweden go-to-market research for an AI note-taking device — demand sizing with OECD indicators, a six-app competitive benchmark, and GDPR risk assessment.

Republic of Korea Army — Gangwon, South Korea

Supply Specialist (Class I Warehouse), Sergeant | Dec 2020 – Jun 2022

- Managed Class I warehouse resupply across 12 item categories under tight timelines; earned Early Promotion and was discharged as Sergeant.

SELECTED PROJECTS

- Seoul Smoking Booth Siting** ([seoul-smoking-booth-siting](#)) Ranked where Seoul should install outdoor smoking booths — districts selected on complaint and smoking-rate data, then random-forest feature importance scored a 500 m grid minus regulatory buffers, final sites verified on street view. Rebuilt from a 2024 QGIS study into a one-command Python pipeline with 60 tests.

SKILLS

Python | TypeScript / Next.js | SQL (SQL Server) | Excel / VBA | FastAPI | Prisma | GeoPandas / scikit-learn | Git / GitHub

Languages: Korean (native), English (fluent)

AWARDS

Excellence Award, company-wide AI Utilization Contest — Hansae Mobility (2026) · First Prize, BITLO Trade & Logistics Competition — Busan Development Institute & Busan Port Authority (2024) · Best Debater & Best Project — Dongwon Group talent-development program (2023)

EDUCATION

Pukyong National University | Double major, International Business & Big Data Convergence | Busan, Korea | Expected Aug 2027

Exchange: Georgia College & State University (Jan – May 2025) · Wayne State University, Detroit, MI (May – Dec 2025)
